How to study effectively?

Ex 10

Ex 11

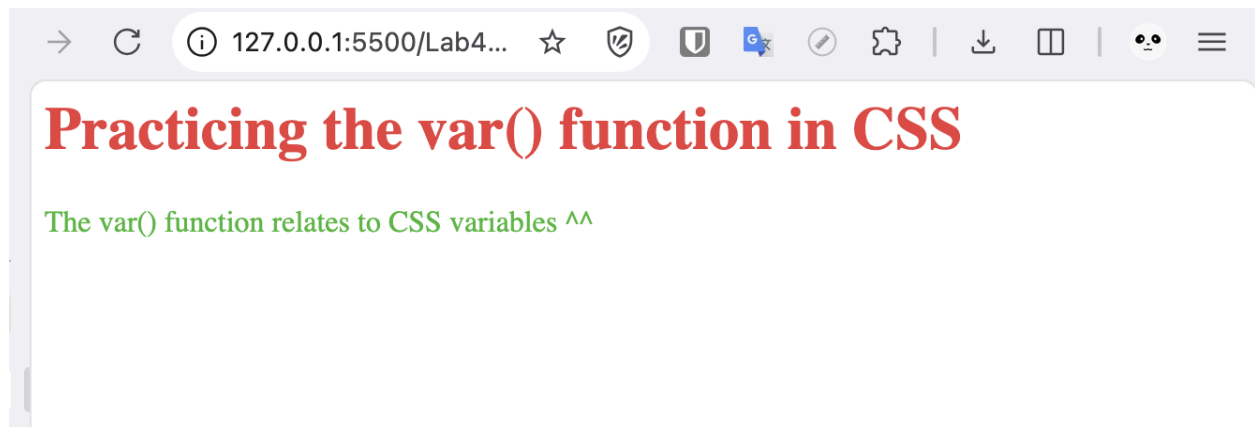

A screenshot of a web browser window. The address bar shows "127.0.0.1:5500/Lab4...". The page displays an article with the title "Over 10,000 downloads of 'Super Thief' game in 2016". The text describes a game called "Super Thief" that allows users to interact with a physical claw machine device via an Internet connection. It mentions that players use a drone with a claw to pick up gift boxes and drop them into a tunnel. The article also notes that rewards can be redeemed directly as phone cards and that the game has a unique feature of requiring players to "wait" for their turn. At the bottom of the article, there is a bulleted list of four faculties: Faculty of IT, Faculty of Fine Arts, Faculty of Dentistry, and Faculty of Languages.

Over 10,000 downloads of 'Super Thief' game in 2016

Unlike traditional claw machine games that operate offline or at game centers, the "Super Thief" game is the first in Vietnam to allow users to interact with a physical claw machine device, using an Internet connection to control the machine and receive images from a camera. With this application, players become thieves, using a drone with a claw to pick up gift boxes and drop them into a tunnel. When successful, players receive a result notification, and rewards can be redeemed directly as phone cards. The unique feature of the game is the need to "wait" for your turn, as the machine allows only one player at a time.
